Art Unit: 1714

1. Applicant's election without traverse of group I, claims 1, 3-13, and 15-31 and the species of acrylate, furfuryl-containing ring, and compounds having a furfuryl ring and an acrylate reactive group which species read on claims 1, 3, 5-13, and 15-31 in the reply filed on 4/20/06 is acknowledged.

2. The references of page 4 of the IDS of 12/1/03 were not supplied with the instant application and are not readily available to the examiner, with the exception of the single initialed reference. They were therefore not considered.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1, 3, 5-13, and 15-31 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 28-32 of U.S. Patent No. 5853894 Brown in view of the Sartomer Bulletin regarding CD611 printed 8/4/03 and supplied by the applicant.

Art Unit: 1714

Claims 28-32 of Brown, particularly the functional acrylate monomers of claim 32 of Brown encompass the instantly claimed composition broadly except that the instantly claimed species of adhesion promoter is not claimed. It is not seen that the instantly claimed adhesion promoters are disclosed by the CIPs and DIVs from which the instant application claims benefit. The Sartomer bulletin is therefore prior art with respect to the use of the instantly claimed adhesion promoters. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the alkoxylated tetrahydrofurfuryl acrylate of the Sartomer bulletin as the functional acrylate of Brown because Brown encompasses such functional acrylates and they would have been expected to give the intercoat adhesion, i.e. adhesion promotion, described in the Sartomer bulletin.

5. Claims 1, 3, 5-13, and 15-31 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 28-32 of U.S. Patent No. 6495624 Brown in view of the Sartomer Bulletin regarding CD611 printed 8/4/03 and supplied by the applicant.

Claims 1-48 and 58-60 of Brown, particularly the acrylics of claims 22 and 41 of Brown encompass the instantly claimed composition broadly except that the instantly claimed species of adhesion promoter is not claimed. It is not seen that the instantly claimed adhesion promoters are disclosed by the CIPs and DIVs from which the instant application claims benefit. The Sartomer bulletin is therefore prior art with respect to the use of the instantly claimed adhesion promoters. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the alkoxylated tetrahydrofurfuryl acrylate of the Sartomer bulletin as the acrylic resins of Brown because Brown encompasses such acrylics and they would have been

expected to give the intercoat adhesion, i.e. adhesion promotion, described in the Sartomer bulletin.
